

# Where to locate new energy infrastructure? A natural capital approach

**Gemma Delafield**

Greg Smith, Brett Day & Ian Bateman

 @G\_Delafield

# What is the UK's current climate strategy?

Climate Change Act 2008

 **GOV.UK**

Press release

**PM Theresa May: we will end UK  
contribution to climate change by  
2050**

# How have the UK's energy emissions changed?

**57% reduction** in emissions from energy supply sector between 1990 and 2016

# What is the UK's current electricity mix?

**National Grid ESO**

@ng\_eso

Following

Great Britain has now gone over 18 days (432 hours) without coal!

3:15 PM - 4 Jun 2019

What's

NEXT

# What will the UK's future energy system look like?

## The Security of UK Energy Futures

UKERC Research Report

Which energy technologies?

How much energy is needed?

Where will energy infrastructure be located?

# Why do we need to spatialize energy pathways?

Renewables have a larger spatial footprint

0.2 m<sup>2</sup>/MWh

500 m<sup>2</sup>/MWh

Land is a scarce resource

Costs and environmental impacts differ spatially

Terrain

Value of land

Proximity to grid

CO<sup>2</sup>

Emissions

Visual impact

Biodiversity

# How do we make the best decisions for society?

Construction costs etc.

Opportunity costs

Electricity

Market values

Social value

Non-market values

Visual amenity

Flooding

Carbon storage

CO<sup>2</sup>

 HM Government

A Green Future: Our 25 Year Plan to Improve the Environment

# Research focus

- Develop a **spatial cost minimisation model** to identify the socially optimal locations for new energy infrastructure in the UK
  - ...determine the cost of **excluding land to protect food production and the natural environment**
  - ...explore how **ecosystem service models** can be incorporated into energy modelling

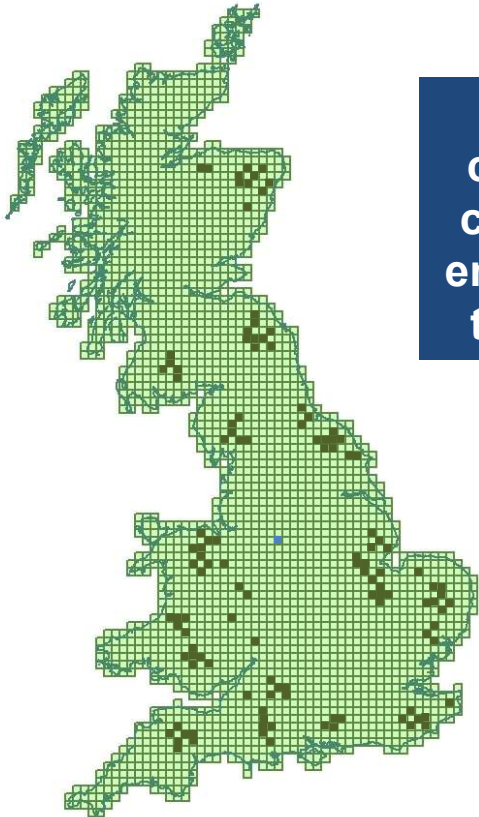

# Model development

# How can we spatialise energy pathways?

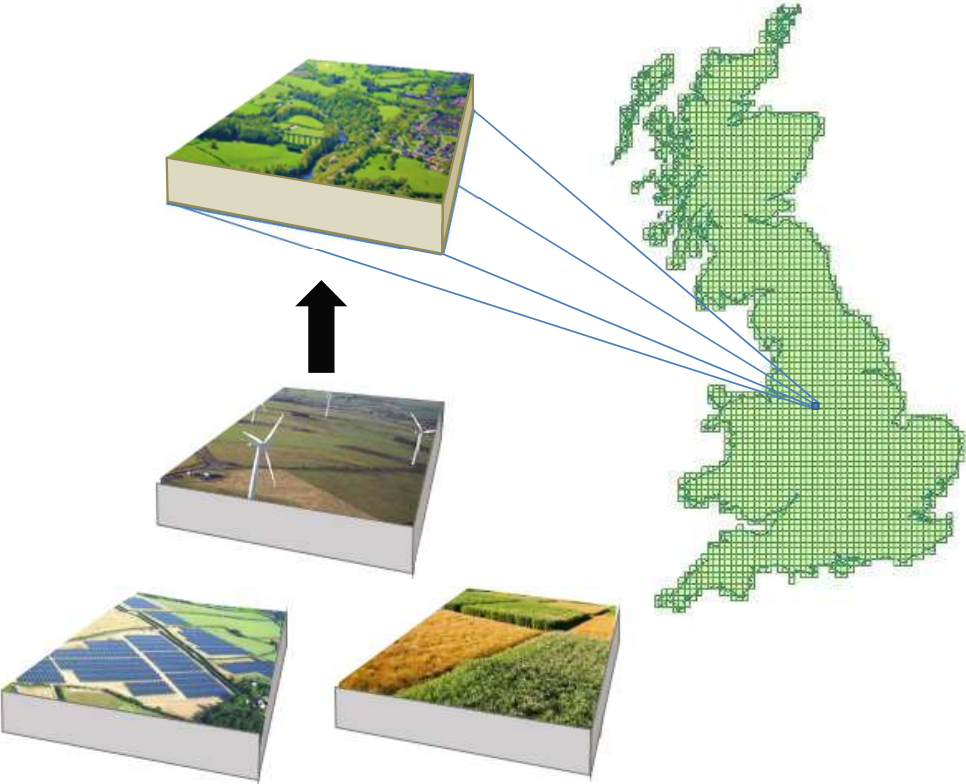

## Energy scenario

**Which combination of cells deliver the energy system at the least cost?**

# How can we spatialise energy pathways?

## Market values

## Non-market values

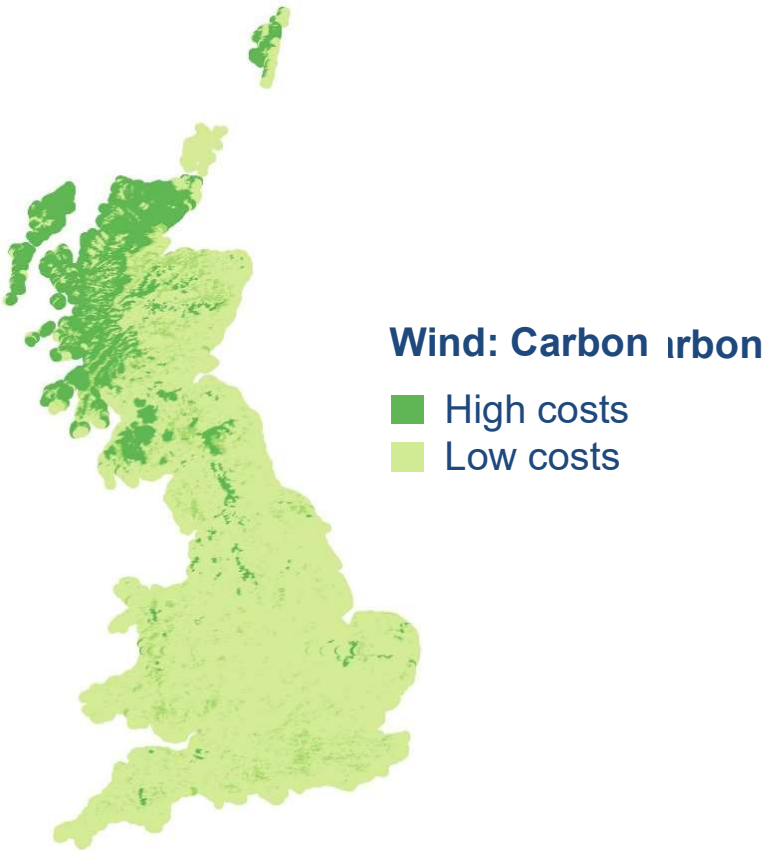

# How do we include the value of nature?

## Non-market values

CO<sup>2</sup>

# **Application of model**

## Preliminary findings

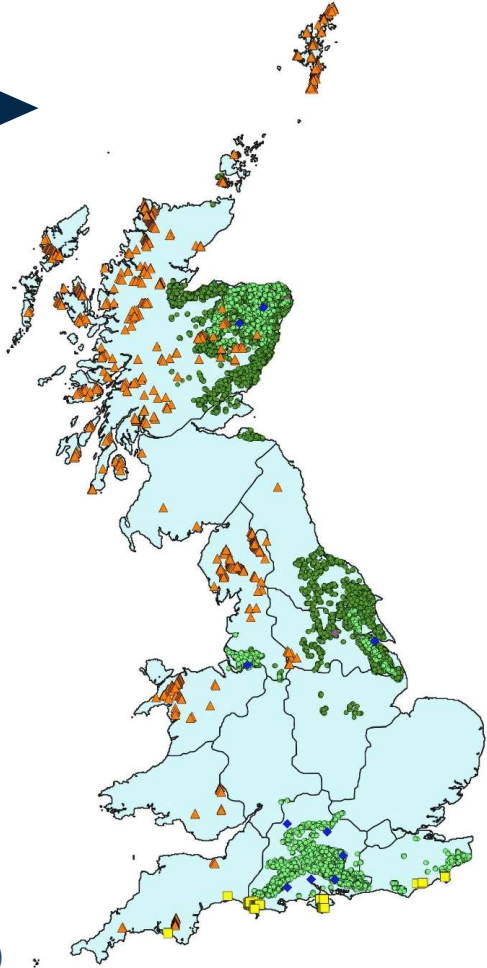

# How much energy infrastructure is needed?

Example from Watson et al., 2018

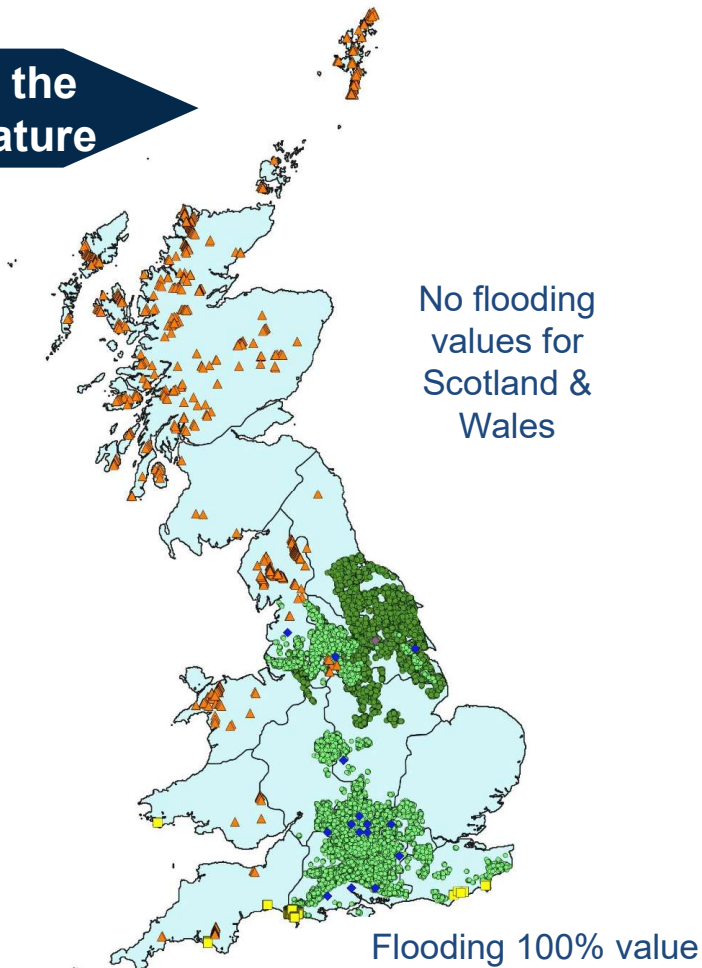

Technology	2015-2050
Bioenergy (40 MW)	29
BECCS (500 MW)	2
Solar Farms (5 MW)	856
Wind farms (10 MW)	810

# Where are the 'best' locations for new energy infrastructure?

Excluding the value of nature

Including the value of nature

- Solar
- ▲ Wind
- ◆ Bioenergy power station
- Bioenergy crop
- ◆ BECCS power station
- Bioenergy crop (BECCS)

# Thank you for listening!

## Key messages:

1. Spatial optimization allows us to improve our understanding of the feasibility of different energy futures.
2. Including the value of the environment in energy modelling could help improve decision-making.

 @G\_Delafield
