

Genomic Medicine 2021/22

All modules will be available as either on-campus or distance learning. Both versions run over the same time period and have the same curriculum and assessment. You only attend the contact days if you are registered for the campus-based version of the course. ONLINE students will study completely at a distance. There is an opportunity to mix and match the two modes of study. You will make your module choices once you have completed the registration process.

EXCEPTIONS: Counselling Skills and Professional Research Skills will be on-campus only
