Succeeding in Canada

The Story of International Talent

Top international students from Brazil, China, India, Mexico, and other countries can experience Canada's universities, research facilities, and training opportunities. Through the Mitacs Globalink Research Internship (GRI), students undertake research projects with Canadian faculty. We surveyed applicants and interns on the impact of their experience and their connections to Canada.

95%

of interns spoke positively about their experience in Canada and encouraged friends to come to Canada for research, internships, or employment.

Here's why:

Rich Program Opportunities

of students said that the availability of the GRI was the top factor influencing their decision to come to Canada. Without the GRI program, only 7% would have come to Canada.

More than three-quarters of interns have

successfully convinced at least one fellow student or friend to come to Canada for a research internship

Ongoing Collaboration

of interns intend to develop, or have already developed, collaborations with Canadian researchers

of interns stayed in touch with their host professor

56% of interns are in touch with other researchers from the host professor's lab

Positive Future Prospects

of interns feel more employable and have improved their professional skill set

of interns strongly feel their experience has had, or will have, a significant impact on their careers

of interns currently studying in Canada said their participation in the program convinced them, or reinforced their decision, to pursue additional studies in Canada

of interns enrolled in a new degree in Canada have applied or will apply for permanent residency

of interns enrolled in a new degree are now studying in Canada, as opposed to only 9% of applicants who did not complete an internship with Mitacs
